

# Scottish Care Lifecurve™ Survey

## Information Sheet for Staff

### Scottish Care Lifecurve™ Survey

#### Introduction

We are asking you to take part in a national Lifecurve™ Survey on behalf of Scottish Care. The Lifecurve™ describes how we age and can therefore help us think about what we can do to keep as active, fit, healthy and independent as possible. If we know what activities a person is not able to do, this will help us think about what type of service we need to provide in the future. The results of this survey will help us to do this.

**Please ensure that each survey is returned with a completed consent form to the following address:**

#### **FAO Professor Philip Rowe (AILIP)**

Professor of Rehabilitation Science, Bioengineering Unit  
University of Strathclyde, Wolfson Centre, 106 Rotten Row  
Glasgow G4 ONW

#### Information to give to the service user

Scottish Care is doing a national survey of the people who use care at home services and we would like to ask you to take part.

The Survey is designed to help us improve the care at home services we provide.

The survey is in 2 parts – the first has questions about some everyday activities – some of which we are here to help you with. I will ask you for each activity whether you are able to do the activity without any help from a person or a piece of equipment. For the activities you are unable to do without this help we will ask you how long you think it is since you have needed help for.

The second part of the survey asks a few additional questions about some aspects of your life. These will help us to build a better picture of the circumstances of people who use our services so we can make improvements.

Thank you for taking part in the Survey.
